The most suitable primary key for the table above would be Room_NO. A primary key is used in a relational database that is unique for each record. Some P_Code, P_Name and Instructor are repeated in the table, making them not unique, therefore they are unsuitable primary keys. Using Duration (Hrs) or Hourly_Rate as the primary key wouldn't make sense either. Room_No appears to be the only attribute that is unique and helps distinguish each training course.
